

Section 3 of 4 — Dashboard / App Walkthrough

Career Compass SG · Module 1 Assignment · Group 7

Your time: 3:00 (official range 3–4 min) · You run the live demo

Your job in one sentence

Show the main views, the interactions, and how each one answers the business question. The rubric's words exactly. Three screens, three interactions, and the ranking changing live in front of the room — that is your whole section.

Where you sit in the flow

	Section	Time	Official guide
	1 · Business case & objective	2:15	2–3 mins
	2 · Process & data handling	3:30	3–4 mins
→ YOU	3 · Dashboard / app walkthrough	3:00	3–4 mins
	4 · Challenges & learnings	1:15	1–2 mins

Section 2 hands you: *"...the dashboard we built on top of it."* **Your handover to Section 4:** *"That's the product. My teammate will close with what this project taught us."*

Before you start

- Dashboard already running at `http://localhost:8501` — never start it live
 - Browser zoom ~80% so charts fit the projector
 - Recommender inputs pre-set: **3 years' experience, \$4,000 minimum salary**
 - Screenshot backup slides for all three screens
 - **Discipline: three screens, not seven. Do not free-roam.**
-

Script

Screen 1 — Market Overview (0:00 – 0:40)

Our dashboard has seven pages: six pages of **proof**, one page with the **answer**. Let me show you the three key pages.

(Screen 1: Market Overview)

The front page answers: **how big is this job market?** One million postings. **Middle salary: \$3,850 a month.** And **36% of jobs are open to people with one year of experience or less.**

Two things appear on every page. **Every chart has its main point written in one sentence above it** — point first, proof second. And this **grey area** marks months where our data was not complete, so nobody thinks the market crashed there.

Screen 2 — Demand vs Competition (0:40 – 1:40)

(Screen 2: the opportunity map)

This page answers: **where are the good chances?**

Every bubble is one job category. **Higher up means more jobs. Further right means more people fighting for each seat.** Bigger bubble, more open seats; darker colour, better pay.

Top-left is the best place — many jobs, almost nobody in the queue. F&B sits there: **one applicant per seat.** Top-right is the trap — many jobs, but everyone wants them.

The gap is huge: from **0.7 applicants per seat** in Personal Care up to **11.3** in Social Services — **sixteen times difference.** No job website will ever show you this.

This orange note says competition numbers use only the clean part of the data. **We would rather show a warning than a wrong number.**

Screen 3 — Career Recommender (1:40 – 2:45)

(Screen 3: the Recommender — the product)

This page gives the final answer: **which track should I choose?**

Let me be a real user: **changing careers, three years of experience, need at least \$4,000 a month.**

The tool checks all 215 tracks on four things — **how many jobs, how good the pay, how many rivals, and how easy it is for me to get in** — then puts them in order.

Top answer for me: **IT at mid level.** 69,000 postings, \$6,500 middle salary, and 57% of those jobs accept my three years. These coloured bars show **exactly why** it came first. **Nothing is hidden.**

Now watch. What if I don't want the best pay in five years — **what if I need a job in six weeks?** (*drag "Easy for me to enter" up, "High pay" down*)

The whole top five changes — HR, Sales, Education, at entry level. Not one job from the old list is left. Same data, different person, different answer. **The score is a set of sliders — not a machine telling you what to do.**

Handover (2:45 – 3:00)

So: six pages of proof, one page with the answer, and every number can be checked.

That's the product. My teammate will now close with what this project taught us.

Numbers you must know cold

Figure	Value
Front page	1M postings · \$3,850 median · 36% entry-friendly
Competition spread	0.7 → 11.3 applicants per seat (16×) · F&B 1.0
Demo persona	3 years' experience · \$4,000 minimum
Top result (default)	IT – Mid: ~69k postings · \$6,500 · 57% open to 3 yrs
After slider change	HR / Sales / Education at Entry — zero overlap
Tracks scored	215 · four components · weights 30/30/25/15

Backup if the demo fails — read this table out:

Rank	Balanced (default)	"Easiest to enter"
1	Information Technology – Mid	Human Resources – Entry
2	Information Technology – Senior	Sales / Retail – Junior
3	Sales / Retail – Junior	Sales / Retail – Entry

Questions you own

"Aren't the score weights just your own choice?"

Yes — on purpose. That is exactly why they are sliders the user controls, not fixed numbers we hid in the code. There is no single "right" balance between money and getting hired fast — it depends on the person. What we promise is: the four inputs are measured honestly, and you can see how much each one added to the score.

"What filters does it have?"

A filter panel on the left of every page: time period, job type, seniority, salary range, and open-jobs-only. When you change a filter, everything recalculates live from 1.77 million rows — in about 0.06 seconds.

"Why does the map use a log scale on the vertical axis?"

Because category sizes go from a few hundred postings up to 140,000. On a normal scale, the smaller half of the market would be squeezed flat at the bottom and you could not see it. The axis is clearly labelled.

"Does the recommender know anything about me personally?"

Only two things: your years of experience and your lowest acceptable salary. It ranks market conditions — it does not know what work you would enjoy. The app says this in plain words on the page.

If the live demo fails: switch to the screenshots and the backup table. **Never debug in front of the room.**

Rehearsal checklist

- [] Timed at **3:00 or under**, including the slider drag
- [] The three-screen path rehearsed on the presentation machine, three times
- [] Sliders dragged on that machine — you know exactly where they are
- [] "0.7 to 11.3, sixteen-fold" said from memory
- [] Backup screenshots on your own slides
